

## Product Release

4/1/07

San Rafael, California ... Stage 8 Fasteners Inc.

Contact: Robert Ahern or Glenn Thompson: 415 485 5340

### For Immediate Release:

Stage 8 Fasteners continues its 100% success rate, 20 years no failures, with their line of locking collector bolts. Street performance enthusiasts and racers alike are not only discovering that **Stage 8 Locking Header Collector Bolts** are easy to use but they are absolute insurance against horsepower loss or noisy exhaust leaks created by loose nuts or bolts. This unique patented and trademarked functional design is just four pieces: a grooved bolt (Zinc Plated Steel), a locking retainer, a spring clip and a threaded lock-tab. The **Locking Collector Bolt Kits** will work with all headers that have a bolted flange and include six unique and patented grooved 3/8 X 16 X 1" bolts, six locking retainers, six spring clips and six threaded lock-tabs. **Stage 8 Locking Fasteners** are also available in custom sizes and materials by special order.

Critical parts are easily secured. Vibration, stress conditions, and constant wide temperature swings will no longer loosen vital components. As an example, no more loss of horsepower caused by leaking exhaust manifolds, headers or turbochargers; no more oil leaks from valve covers or oil pans. **Stage 8 Locking Fasteners** has fitments for most popular domestic and import vehicles and are available in an extensive list of application specific kits.
