

## Product Release

8/20/2006

San Rafael, California ... Stage 8 Fasteners Inc.  
Contact: Robert Ahern 415 485 5340

### For Immediate Release:

Stage 8 Fasteners continues its 100% success rate, 21 years no failures, with their line of locking fasteners. Automotive enthusiasts and racers are not only discovering **Stage 8 Locking Fasteners** easy to use but they are absolute insurance against horsepower loss or costly damage created by loose nuts and bolts. The unique patented and trademarked functional design is just three pieces: a bolt (4130 Alloy Steel), a locking retainer and a spring clip or depending on the application a nut, a locking retainer and a spring clip. The bolts are application specific as either hex head with a 3/16 recessed allen head or 12 point, both come in multiple lengths. **Stage 8 Locking Fasteners** are also available in custom sizes and material by special order.

Critical parts are easily secured. Vibration, stress conditions, and constant wide temperature swings will no longer loosen vital components. As an example, no more loss of horsepower caused by leaking exhaust manifolds, headers or collectors; no more oil leaks from valve covers or oil pans. **Stage 8 Locking Fasteners** have fitments for most popular domestic and import vehicles and are available in an extensive list of application specific kits. Call on a Stage 8 customer service pro at 1 800 843 7836 or visit [www.stage8.com](http://www.stage8.com) for further information.

## Also...

Stage 8 is much more than the No. 1 manufacturer of locking fasteners for the Automotive Performance Industry. We provide innovative locking solutions for many Fortune 500 Companies, Defense Contractors, Industrial Machinery Manufacturers, Power Train Engineers and more.

***When you have a critical joint, utilizing a nut or bolt, that absolutely must not loosen, we will keep it tight – guaranteed!™ ~ Stage 8***
